

Now you have access to Enterprise Class backup and recovery without all of the IT hassles and expense.

“ 7 of 10 small firms that experience a major data loss go out of business within one year. ”

– DTI/PriceWaterhouse Coopers, 2004

Data backup and disaster recovery are of paramount importance to today's small businesses – especially individuals in business for themselves. Designed specifically for single users and remote offices, Axcient's Envoy is the comprehensive online backup solution that ensures your data is safe and that your business is protected from downtime due to data corruption or loss. Using the highest security protocols in the industry, your data is securely transferred and safely stored at one of Axcient's Class-A data centers where it is available 24x7x365 for immediate retrieval.

It's easy as 1-2-3.

Now you have access to Enterprise Class backup and recovery without all of the IT hassles and expense.

Axcient understands the IT limitations and budgetary constraints of small businesses and individual users, so we've designed our solutions to require virtually no IT knowledge or support and to be very cost-effective. For most of our customers, the annual cost of a solution is less than the cost of lost revenues from just 2 hours of downtime.

Step 1: Plug-and-Play Set-up

It's easy as 1-2-3 (continued)

Step 2: Automatic Backups

Step 3: Data Restore

How it Works

Axcient's Envoy is a software solution designed for desktops and laptops. Using IPsec VPN technology, data is securely transferred offsite via the Internet. Backups occur automatically at specified intervals; once configured, there's no need to worry about forgetting to backup. Axcient's Envoy takes care of everything for you. What happens if you aren't connected to the Internet when a backup is scheduled to occur? The Axcient Envoy will automatically begin your backup when your next backup is scheduled to occur and will continue where you left off. Transfers are done at bit-level, which means once you've done your initial backup, only the changes you make to existing files are sent to the data-center, reducing the time and bandwidth required to do your backups by as much as 20x.

KEY FEATURES & BENEFITS

- Easy to install and intuitive to use – setup takes less than 15 minutes

- Automated Backup – no more guesswork or manual processes

- VPN IPsec transfer protocol – the most secure data transport method, HIPPA, SOX compliant

- Ultrafast backups and restores using bit-level transfer technology

- 24x7x365 access to data for recovery

- Simple drag-and-drop restores

- Email notification upon successful backup completion

- Cost-effective
